## Economic Commission for Europe

### Inland Transport Committee

#### Working Party on Customs Questions affecting Transport

##### Informal Ad hoc Expert Group on Conceptual and Technical aspects of Computerization of the TIR Procedure

###### Nineteenth session

Belgrade, 13–14 September 2011

Item 3(c) of the provisional agenda

###### Reference Model of the TIR procedure:

###### Chapter 4 – Design

## XML messages

### Note by the secretariat

#### I. Background

1. At its eighteenth session, the Informal Ad hoc Expert Group on Conceptual and Technical aspects of Computerization of the TIR Procedure, further referred to as the Expert Group, welcomed document ECE/TRANS/WP.30/GE.1/2011/4 containing the revised UN/EDIFACT E9 and E10 messages. It supported the secretariat's proposal that Extensible Markup Language (XML) Schema Definition (XSD) files should not be included in the eTIR Reference Model but rather be made available on the eTIR web site. The Expert Group also reiterated that input from external experts will be required to ensure completion of the technical documentation and invited Governments to contribute to this task by means of providing either human or financial resources.

2. The Dutch Customs administration kindly offered to continue its support to the elaboration of Chapter 4. Dutch Customs invited the secretariat in Apeldoorn (Netherlands) for a working meeting (2–4 August 2011) on the elaboration of standard eTIR XML messages. Further to this meeting, Mr. Hans Greven, with the help of Mr. Sybrand Bootsma, developed XML Schemas for all eTIR messages, based on the results of the meeting as well as on international standards, including those from the World Customs Organization (WCO). Furthermore, they prepared the message structures and guidelines presented in the Annex to this document.

## II. Open question

3. While developing the XML messages, a question arose with the E9 and E10 messages. Indeed, unlike all other messages, the structure of those two messages can fully be aligned to the WCO standards. The reason for this is that the scope of WCO data model (DM) version 3 was restricted to declaration messages – Business-to-Customs (B2C) – and the reply messages – Customs-to-Business (C2B). In eTIR, numerous messages go beyond the scope of the WCO DM. The major difference between the WCO message structure and the one used in most eTIR messages is that, in eTIR, the declaration class is not systematically the message header class. Instead, a generic message header class has been created allowing the submission of all kind of information. In the preliminary developments of version 4 of the WCO DM, the idea of creating a generic header class (document or message) has already been discussed and seems rather inevitable in case the WCO would like to widen the scope of the DM version 4 to include Customs-to-Customs (C2C) messages and the possibility to communicate other documents, e.g. certificates.

4. Bearing this in mind, it was unclear if the E9 and E10 messages should be defined with the same message header as all other eTIR messages or be kept fully compatible with WCO DM version 3.

5. Furthermore, data elements in Chapter 3 of the eTIR Reference Model have been defined with standard types. From a technical perspective, data types can be more complex than root type, such as binary, float or integer, and are, therefore, not only composed of a content component but also of supplementary components. This is particularly true when it comes to data elements such as codes and identifiers. Table 1 presents the list of all supplementary components in the identifiers and codes, as foreseen in the United Nations Core Components Library (UN/CCL)<sup>1</sup> list of unqualified data types (UDT).

Table 1

**Supplementary components of the Identifier and Code core data types**

<i>Identifier</i>	<i>Code</i>
- <b>schemeID</b>	- <b>listID</b>
- schemeName	- <b>listAgencyID</b>
- <b>schemeAgencyID</b>	- listAgencyName
- schemeAgencyName	- listName
- schemeVersionID	- listVersionID
- schemeDataURI	- name
- schemeURI	- languageID
	- listURI
	- listschemeURI

6. So far, the developed eTIR XSD files as well as XML structures and guidelines presented in the Annex, only have some of the supplementary components included, i.e. those that are in bold in the table, and their status is optional. The Expert Group might want to consider if other of those supplementary components would have to be included and decide on the status (mandatory or optional) of each of the supplementary components.

### **III. Further considerations**

7. The Expert Group may wish to discuss the XML guidelines and schemas presented in the Annex, consider the open question presented in section II and, possibly, request the inclusion of the XML message structures and guidelines in Chapter 4 of the eTIR Reference model as well as the creation of a new page on the eTIR web site as a repository for the eTIR XSD files.

## Annex

### eTIR messages

#### XML structure and guidelines

##### 4.2.3. Messages Implementation

##### 4.2.3.1. XML

##### 4.2.3.1.1. External messages

##### 4.2.3.1.1.1. E1 – Register guarantee
