

Subject: India's comments on Proposal from Japan suggesting amendment to Regulations Nos. 98 and 112 for the use of additional light source for night vision systems.

India's comments:

The Proposal is acceptable in principle.

However, there could be stray visible radiation from the infrared source, which may alter the color and photometric performance of the device.

Therefore, it is suggested that an additional condition that

"The photometric and colour requirements for the device shall be met with and without operating the additional light source(s)" may be incorporated in paragraph 6.2.5.2. of TRANS/WP.29/GRE/2004/11 and paragraph 6.2.10.2. of TRANS/WP.29/GRE/2004/14.

It may be noted that document TRANS/WP.29/GRE/2004/7 for similar amendment to Regulation No. 7 has a similar condition.
