

Lower Limit for Booster Use

F. Renaudin 02/02/12

Current Limitation

- Current R44 limitation :
 - ‘Child restraint systems of group I shall belong to the integral class unless they are fitted with an impact shield ...’
- Practically the lower limit is the one of group 2 : 15 kg

Proposal

- Translate weight limitation in stature limitation.
- According to IFTH survey 15 kg is :
 - ~ 50th percentile weight of 100 cm child
 - ~ 95th percentile weight of 94 cm child
 - ~ 5th percentile weight of 105 cm child

Proposal :

- Define 100 cm as the lower stature authorized for a non integral seat
 - 50th age of a 100 cm child is ~ 3 y and 9 m
