GTR 07 phase II Backset measurement variations

Michael Gumprecht / Ines Levallois

19th march 2012

HRMD-backset measurement: *Precision HPM + HRMD*

Backset repeatability and reproducibility measurements :

Test series 1 :

Backset of the same seat (same adjustments) are measurement by 4 different trained technicians by using 3 different HPM and the same HRMD :

Seat A	Technician	HPM	HRMD	Backset [mm]
	A	A	A	41
	B	A	A	42
	A	B	A	43
	A	C	A	35
	B	B	A	42
	B	C	A	34
	C	B	A	40
	C	C	A	41
	D	B	A	43
	D	C	A	40

- Backset differences of up to 9mm are measured (= HPM + technician influence)

HRMD-backset measurement: *Precision HPM + HRMD*

Backset repeatability and reproducibility measurements :

Test series 2 :

Backset of the same seat (same adjustments) are measured by 4 different trained technicians by using 3 different HPM and 3 different HRMD :

Technician	HPM	HRMD	Backset [mm]
			Seat B
A	B	A	66
A	C	A	63
B	B	A	66
B	C	A	63
C	B	A	74
C	C	A	68
D	B	A	70
D	C	A	67
C	C	B	56
C	C	C	58
C	D	C	61
C	D	B	63

- Backset differences of up to 11mm were measured with 3 different HPM and 1 HRMD
- Backset differences of up to 18mm were measured with 3 different HPM and 3 HRMD

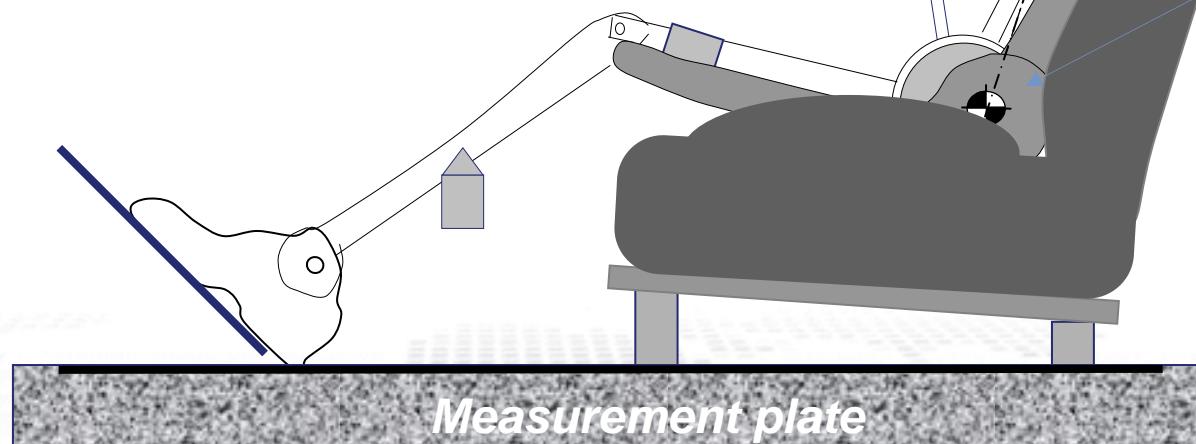

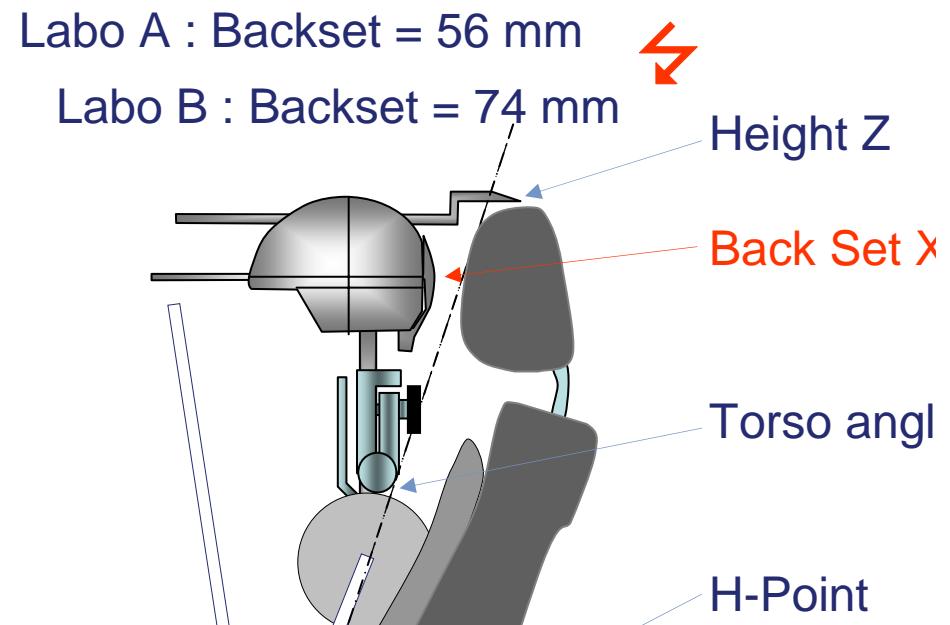

HRMD-backset measurement: *Precision of tools*

The problem :

Significant differences in the results of **backset** measurements between different laboratories on the same seats !

Influence factors of measurement tool :

- Variability of SAE J826 tool
- Variability of HRMD tool
- Variability of Calibration procedures
- Variability of seat and H-point tool set-up

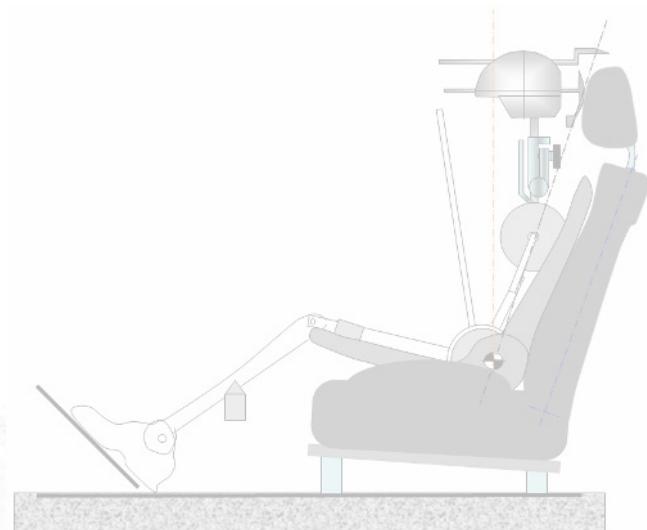

HRMD-backset measurement: *Influence factors : Seat and tool set-up*

Seat adjustments differ depending on procedure :

- seat back adjustment
- height adjustment/tilt adjustment
- head restraint adjustment

HPM and HRMD set-up procedure may vary in :

- Length of adjustment of legs
- Use of weights
-

HRMD-backset measurement: Influence factors : SAE J826 (HPM)

Automotive Seating

H-Point-Machines (HPM)

SAE J826 H-point measurement tool :

- In use since decades
- Several suppliers over time
- Few official geometry until 2010
- Past deviations in fabrication tolerances

SAE J826 tool geometry:

- Official 2D geometry only since nov.2008 with large tolerances
- Preliminary 3D data set since june 2011 without tolerances
- GTR 7 based on 1995 version of SAE J826 (without geometry)

Tools for HRMD-measurement: Are these precise enough?

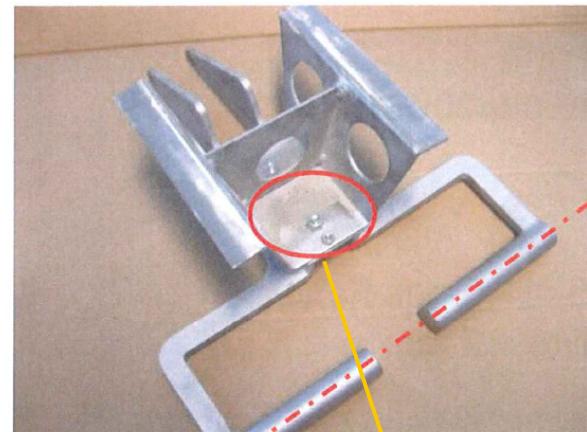

CAHRS-Whiplash-Praxis-Konferenz 20./21. Oct. 2010 :
Comparison of several HPM's (Lear/Audi/Faurecia/etc.)

Unterschiede bei „Weight Hanger“

- a) 6 mm Unterschied der „Weight Hanger“ in X-Richtung
- b) Quelle: GO-DESIGN

Quelle: Lear Corp

Quelle: GO-DESIGN

- a) Anlagefläche für den HRMD mit Abweichung bis zu 9 mm
- b) Lage im Raum und Winkligkeit mit großen Abweichungen > 0,5°

Weight Hanger: Difference of 6 mm in X

Interface of HPM/HRMD :9 mm in X
and more than 0.5° in angle

Tools for HRMD-measurement: Are these precise enough?

5

LEAR
CORPORATION

Overlay of different HRMD scans :
(AUDI/LEAR/FAURECIA/AUTOLIV)
and compared with CAD:
 $X = 0,2 - 7,12 \text{ mm}$
 $Z = 0,59 - 6,44 \text{ mm}$

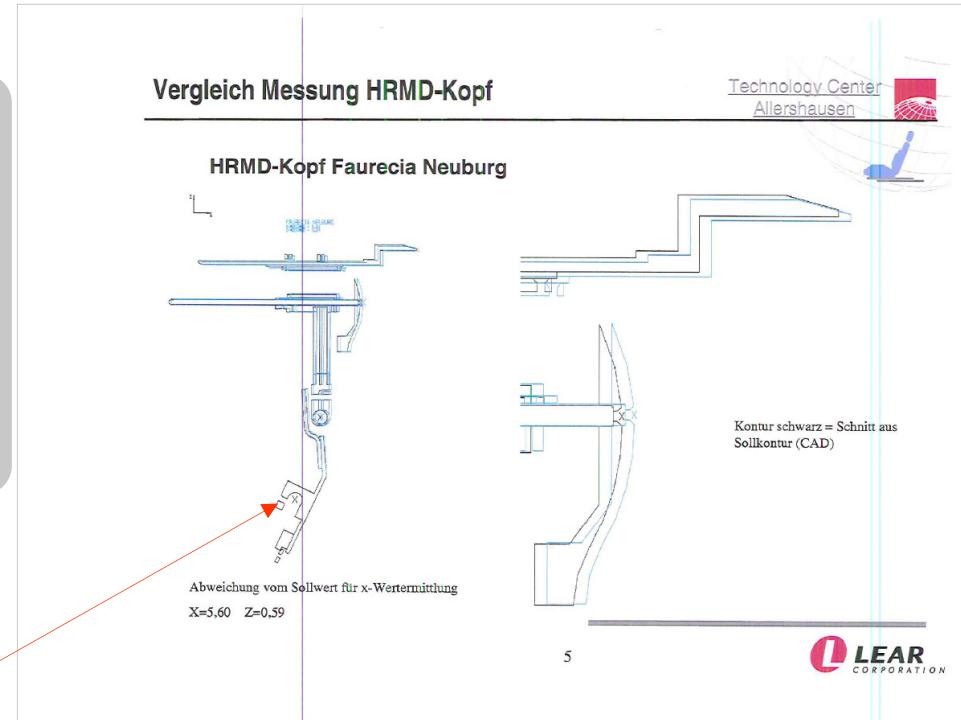

HRMD-backset measurement: Influence factors : HRMD

Head Restraint measurement device :

- 3D geometry : secret of ICBC (owner)
- Few 2D geometry officialized
- Scans showed large tolerances
- Imprecise interface of HRMD on SAE J826 dummy

HRMD – Interface on SAE Dummy vary by up to 9 mm and up > 0.5° in angle

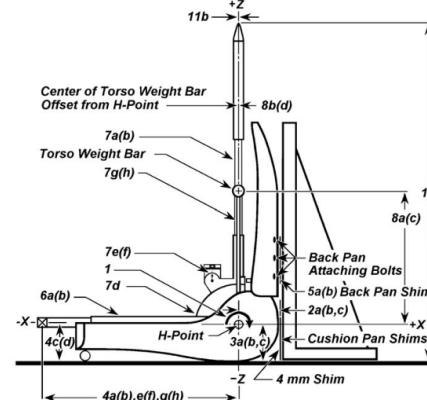

Overlay of different HRMD's scans :
(AUDI/LEAR/FAURECIA/AUTOLIV)
and compared with CAD:
 $X = 0,2 - 7,12 \text{ mm}$
 $Z = 0,59 - 6,44 \text{ mm}$

HRMD-backset measurement: *Calibration procedure HPM + HRMD*

faurecia

Automotive Seating

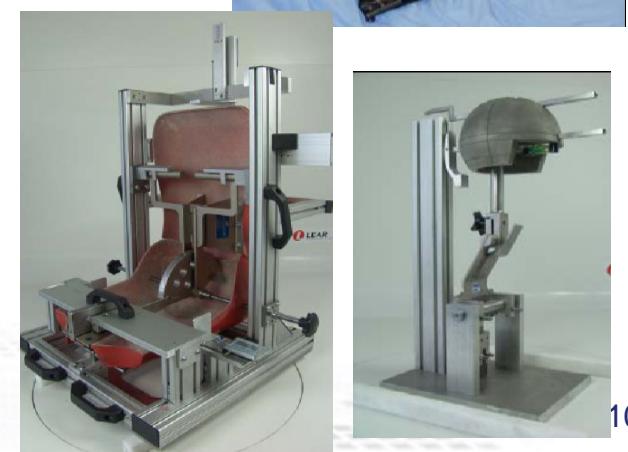

- **SAE J826 calibration :**
 - HPM only calibration, but large tolerance!

- **Gloria calibration : (EuroNcap)**
 - Calibration of HRMD in relationship to HPM pans only
 - Improved, but still significant tolerances as influences from HPM pans are not excluded

- **Full HRMD + HPM calibration :**
 - Calibration of HRMD
 - Calibration of HPM shells with reduced tolerances
 - Best procedure

HRMD-backset measurement:

Precision HPM + HRMD

Conclusions :

- Test series showed differences of up to 18mm for backset measurements with 3 different HPM and 3 HRMD on the same seat
- SAE J826 as defined today in SAE J826:1995 is not able to guarantee a sufficient precise geometry of the HPM able to be used together with the HRMD.
- HRMD geometry and tolerances must be controlled for the backset measurement
- Only certain HPM with reduced tolerances in comparison to SAE J826 shall be used for backset measurements.
- HPM + HRMD must be calibrated together.

HRMD-backset measurement: Precision HPM + HRMD

Proposal to improve the reproducibility of the backset :

SAE J826:nov 2008

Filter with reduced tolerances

HPM able for backset measurement
(reduced tolerances)

+

HRMD with defined tolerances

+

HRMD/HPD calibration as a whole

Proposal for a HPM compliant for backset measurement :

SAE J826 with reduced tolerances able for backset measurements :

- HPM back pan width [+/- 1mm]
- HPM cushion pan width [+/- 1mm]
- Cushion and back shell pan position versus H-point :
[+/- 1mm]
- HPM back pan height [+/- 1mm]
- HRMD interface on SAE dummy
- Torso line measurement plate [0°/+0.3°]
