

Updated information on OICA's proposed amendment to UN Regulation 101 (Fuel and Energy Consumption and Emissions of CO₂)

Update:

- In GRPE 78, OICA presented informal paper GRPE-78-20e to describe a planned proposal to amend UN R101 to accept the tests currently performed in the EU in the interest of correlation between NEDC and WLTP.
However:
 - The task of compiling the required working paper was greater than anticipated and the period between GRPE 78 and GRPE 79 was shorter than usual.
 - In the interim, Australia has published circulars 79/04-4-1 and 81/02-2-1 which locally resolve the immediate concern.
- OICA have therefore elected to postpone presentation of the working paper to GRPE 80 (January 2020) and would like to thank all interested parties for their patience in this matter.
