

**ECONOMIC COMMISSION FOR EUROPE**

**INLAND TRANSPORT COMMITTEE**

**Working Party on Inland Water Transport**

# **Prevention of pollution of inland waterways by vessels**

**Revision 1**

**Addendum 1**

**UNITED NATIONS**  
**Geneva, 2021**

## Note

In 2019, the Working Party on Inland Water Transport (SC.3) adopted the revised annex to resolution No. 21 “Prevention of pollution of inland waterways by vessels” (ECE/TRANS/SC.3/179/Rev.1) and decided to complement this with the updated list of reception facilities for the transfer of waste generated on board ships on European inland waterways as an appendix.

The list of reception facilities was published first in 1999–2003 as TRANS/SC.3/150 and Adds. 1–3.

At its sixty-fourth session, SC.3 decided to introduce the updated list of reception facilities for the transfer of waste generated on board ships on European inland waterways to the annex to resolution No. 21 by resolution No. 99 (ECE/TRANS/SC.3/213, para. 51).

## **Addition to resolution No. 21, revision 2, “Prevention of pollution of inland waterways by vessels”**

### **Resolution No. 99**

(adopted by the Working Party on Inland Water Transport on 9 October 2020)

*The Working Party on Inland Water Transport,*

*Recalling* the main objectives and strategic actions set out in the Ministerial declaration “Inland Navigation in a Global Setting” adopted at the International Conference on Inland Water Transport in Wrocław, Poland, on 18 April 2018, in particular, on reducing the risk of accidents and minimizing environmental impact from inland navigation,

*Responding* to resolution No. 265 “Facilitating the Development of Inland Water Transport” of 22 February 2019 of the Inland Transport Committee,

*Responding also* to Policy recommendation No. 4 of the UNECE White Paper on the progress, accomplishment and future of sustainable inland water transport (ECE/TRANS/279) to encourage the modernization and greening of the fleet and infrastructure to better tackle environmental challenges,

*Emphasizing* the need for maintaining and developing a network of reception stations for the transfer of waste generated on board vessels and the necessary infrastructure on European inland waterways,

*Recognizing* the relevance of the ongoing work on the separate collection, processing and recycling of waste generated on board vessels, for the circular economy principles,

*Bearing in mind* the reports of the Working Party on the Standardization of Technical and Safety Requirements in Inland Navigation on its fifty-fourth, fifty-fifth and fifty-seventh sessions (ECE/TRANS/SC.3/WP.3/108, paras. 59 and 60, ECE/TRANS/SC.3/WP.3/110, paras. 64 and 65, and ECE/TRANS/SC.3/WP.3/114, paras. 26 and 27),

1. *Decides* to complement the annex to resolution No. 21, revised, with the appendix contained in the annex to this resolution,
2. *Encourages* Governments to support the separated collection, delivery and processing of waste generated on board vessels;
3. *Invites* Governments and river commissions to inform the Working Party on updates to the information contained in the annex to this resolution;
4. *Requests* the Executive Secretary of the Economic Commission for Europe to periodically include the question of application of this resolution in the agenda of the Working Party on Inland Water Transport.

## I. Introduction

In 1999, the Working Party on Inland Water Transport (SC.3) adopted the recommendations of the small group of experts with the task of identifying the purpose and scope of future ECE work on problems relating to the prevention of pollution from vessels:<sup>1</sup>

- Collection of the polluting substances on board vessels and their delivery to the reception facilities for subsequent processing on the shore could be a definitive solution for the prevention of water pollution from inland navigation vessels.
- Reception facilities should have the necessary capacity and be located at appropriate distances from each other.
- In its efforts to prevent water pollution from inland navigation vessels, each State should make use of the best available technology. Each State should also make provision for infrastructure development measures such as the construction of port waste reception and management facilities, incinerators, etc. These measures should be coordinated and harmonized throughout Europe.
- Each State should apply the “polluter pays” principle. The cost of discharge into reception facilities should not be payable directly so that a vessel cannot make savings out of its waste disposal contributions by discharging its waste into inland waterways.
- A transition period should be scheduled in order to bring the present inland navigation technical infrastructure up to the level required to ensure that inland waterways receive maximum protection.
- During the transition period, each State should be equipped with full waste reception facilities so as to prevent as far as possible pollution from inland navigation vessels.

The types of waste which can be delivered to reception facilities in the table correspond to the types and categories of waste from vessels set out in chapter 10 of the European Code for Inland Waterways (CEVNI) and include additional categories following the information from countries.

The information on reception facilities of Contracting Parties to the Convention on Collection, Deposit and Reception of Waste Produced during Navigation on the Rhine and Inland Waterways (CDNI) is also available on the CDNI website [www.cdni-iwt.org/points-of-acceptance/?lang=en](http://www.cdni-iwt.org/points-of-acceptance/?lang=en).

The information on reception facilities on the Danube is also available on the website of the Danube Commission at [www.danubecommission.org/dc/en/danube-navigation/environmental-protection](http://www.danubecommission.org/dc/en/danube-navigation/environmental-protection).
